

ANISA ASHFAQ

Computer Science Student

Lahore, Pakistan | anisaashfaq234@gmail.com | linkedin.com/in/anisa-ashfaq | portfolio-anisaashfaq.vercel.app

PROFILE

Computer Science student and Junior Software Developer with hands-on, end-to-end experience across full-stack web development, DevOps practices, and software quality assurance. Skilled in containerizing applications with Docker, building and integrating REST APIs with Django REST Framework, and developing responsive frontends with Vue.js, Quasar, and SvelteKit. Experienced in Agile/Scrum delivery cycles, usability and user acceptance testing (UAT), and bug resolution across multiple production client projects. Strong foundation in operating systems, networking, and data structures, with additional project work in embedded/digital logic design and object-oriented programming. Seeking opportunities to grow as a Software Engineer, DevOps Engineer, or QA Engineer.

SKILLS

DevOps & Tools: Docker (containerization & deployment workflows), Git & GitHub, MKDocs, Agile/Scrum, REST API integration

Programming Languages: Python, JavaScript, TypeScript, C++, HTML, CSS

Frameworks & Libraries: Django REST Framework, Vue.js, React, SvelteKit, Quasar, Tailwind CSS

Databases: PostgreSQL

QA & Testing: Manual Testing, Usability Testing, Functional/Accuracy Testing, User Acceptance Testing (UAT), Bug Identification & Resolution, Test Case Execution, Cross-Browser/Responsive Testing, REST API Testing

Tools & Platforms: Git, GitHub, MS Office, MKDocs

Soft Skills: Problem Solving, Time Management, Team Collaboration, Fast Learner

WORK EXPERIENCE

Junior Software Developer — AllSpice Technologies

January 2025 – May 2026

Lahore, Pakistan | Full Stack Development | Agile/Scrum

- Developed and maintained responsive web applications end-to-end using Vue.js, Quasar, and Django REST Framework.
- Built and integrated RESTful APIs, implementing backend logic and connecting frontend interfaces.
- Used Docker to containerize applications and streamline development and deployment workflows.
- Participated actively in Agile/Scrum ceremonies including sprint planning, daily stand-ups, and code reviews, contributing to iterative and reliable release cycles and helping catch defects early.
- Tested and verified RESTful API behavior end-to-end, checking backend logic and data returned to frontend interfaces for correctness before release.
- Conducted usability, accuracy, and user acceptance testing (UAT), identifying and resolving application bugs to improve reliability.
- Collaborated with cross-functional teams (design, backend, QA) to review features against requirements and ensure timely, quality delivery of product features.

RELEVANT PROJECTS

Rotten Fruit & Vegetable Detection — Digital Image Processing Course Project

May 2026

Tech: YOLOv8, Python, Deep Learning, Computer Vision | Live Demo: huggingface.co/spaces/AsmaJavaid0/Rotten-Fruit-Detector

- Contributed as Frontend Developer on a 4-member team building a YOLOv8-based system that detects and classifies fruits/vegetables as fresh or rotten from a single image in one pass, covering 7 produce types across 14 classes.
- Built the results interface displaying bounding boxes, per-item confidence scores, and live counts of fresh vs. rotten items detected.
- Collaborated with teammates on model training/debugging efforts and co-authored the project report.

WhenWe — Digital Memory Book Platform

Client Project

Tech: SvelteKit, Django REST Framework, PostgreSQL

- Developed multiple admin panel pages end-to-end and integrated PDF generation functionality for an online event/memory book platform.
- Conducted user acceptance testing (UAT) and tested PDF generation functionality across scenarios to ensure consistent output.
- Resolved application bugs to improve reliability and usability.

Melbourne Storm DSS — Sports Analytics Platform

Client Project

Tech: Vue.js, Django, PostgreSQL

- Implemented CSV export functionality for a data-driven decision support platform supporting player selection and performance comparison workflows.
- Tested and validated CSV export functionality against expected data output, and resolved application bugs to enhance functionality and performance.

Web-Based Halal Product Evaluation Platform

February 2025 – April 2025

Tech: Vue.js, Django REST Framework

- Built and deployed a full-stack platform for halal product and ingredient evaluation with admin management capabilities.
- Implemented product/ingredient search, halal compliance verification, and a responsive UI, integrating a REST API with a database backend.
- Conducted usability and accuracy testing to validate functionality before release.

Page Replacement Simulator

May 2025

Tech: Python, OS Concepts

- Built a simulator demonstrating operating system memory management using FIFO, LRU, and Enhanced Second Chance page replacement algorithms — core concepts underlying resource management.

Image-Based Plant Height Estimation System

May 2025 – June 2025

Tech: Python, Data Structures & Algorithms

- Addressed the problem of manual plant measurement by building a system that estimates plant height from a smartphone photo using image processing and algorithmic analysis.

Smart Peer-to-Peer Network Visualization

May 2024

Tech: C++, Networking, Graph Algorithms

- Designed a P2P network system to add/remove nodes, display live topology, and compute shortest paths using Dijkstra's algorithm — applying networking and routing fundamentals relevant to distributed infrastructure.
- Visualized network topology using the BGI graphics library in C++.

ATM Machine

March 2024

Tech: C++ (OOP), Dev C++, Graphics

- Created an ATM machine simulation using object-oriented programming (OOP) concepts, combining program logic with graphics in Dev C++ to reinforce core OOP principles.

Library Management System

December 2023

Tech: C++, File Handling

- Built a library management system in first semester using C++, tracking book page numbers and serial numbers and storing book records using file handling.

Four-Way Traffic Control System

September 2023

Tech: Circuit Maker 2000, Digital Logic Design

- Implemented a traffic control system combining a clock, a synchronous 3-bit counter using a D flip-flop, basic logic gates, and a 7-segment display.

EDUCATION

BS Computer Science — Lahore College for Women University

October 2023 – Present

Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming, Operating Systems

FSc. Pre-Engineering — Govt. Islamia Graduate College for Women, Cooper Road, Lahore

August 2021 – May 2023 | Grade: A+ | Courses: Mathematics, Physics, Chemistry, English

Matric (Science) — Govt. Tanveer Islamia Girls High School, Lahore

August 2019 – April 2021 | Grade: A+ | Courses: Mathematics, Physics, Chemistry, Biology

CERTIFICATIONS & WORKSHOPS

- International Workshop on Women Employability in Pakistan — Lahore College for Women University, December 2023

LANGUAGES

English — Professional Working Proficiency Urdu — Native / Bilingual Proficiency
